

# HONING VIDEO SERIES 2

Lightning Learning Sparked by Data™ ⚡

Data-driven, time efficient training for Machine Tools, Machines, and Manufacturing Operations

The THORS Honing Video Series 2 course introduces learners to the concepts that are important to the honing process, such as the process parameters, process steps carried out, bore measurements, bore measuring instruments, and the finish parameters. In addition, the series explores the important safety, best practices, and troubleshooting techniques for the honing operators and the process.

Learning Hours **1.5**

This video series was designed in partnership with Sunnen Inc.

## Learning Objectives

- Describe the important honing process parameters.
- Identify the major honing process steps.
- List the instruments that are used in measuring the form, size, and finish of a honed bore.
- Explain the different surface parameters used in honing.
- Recognize the different bore defects.
- Understand the safety methods and practices employed in the honing process.

Languages

## Course Topics

### Series 2

- Honing Process Parameters
- Honing Process Steps
- Honing Honed Bore Measurements
- Honing Safety and Best Practices
- Honing Troubleshooting
